Assessment Coversheet

Qualification details			
Training Package Code and Title:	**ICT - Information and Communications Technology (Release 8.1)**		
Qualification National Code and Title:	**ICT40120 - Certificate IV in Information Technology (Release 4)**	**State code:**	**BFF9**

Assessment Title	**AT2.2 Project (UI Prototype & VCS Plan)**		
Unit National Code & Title	ICTPRG440 - Apply introductory programming skills in different languages		
	ICTPRG437 - Build a user interface		
	ICTICT449 - Use version control systems in development environments		
Date Due	**Session 9**	**Date Received**	

Student Name	John Richardson	**Student ID**	M196909
Student Declaration	I declare that the evidence submitted is my own work: John Richardson ……		

Assessor Name	Tirtha			
Assessment Decision	☐ Satisfactory		☐ Not Yet Satisfactory	
Assessor Signature			**Date**	
Is student eligible for reassessment (Re-sit)?	☐ No	☐ Yes	**Reassessment Date:**	

Feedback to student
Via Blackboard (LMS) – Please check [Grade] section.
Feedback from student
Via Blackboard (LMS) – Please use [Comment] section during submission.

Student signature		**Date**	

Assessment Coversheet

Assessment Title

Assessment Instructions

TO THE ASSESSOR

Type of Assessment	Project
Duration of Assessment	4 Class Sessions (6 - 9)
Location of Assessment	Classroom
Conditions	Assessor to ensure that the noise levels, natural interactions and time variances are maintained as it would in the be in the Information Technology industry. Learners are required to complete the required tasks in class and submit the required documentation electronically via Blackboard
Elements and Criteria	As detailed in the assessment plan You are required to make sure that all students meet the elements, performance criteria and oral communication items as outlined in the provided checklist.

TO THE STUDENT

Purpose of Assessment	You are required to show you can: ICTPRG440 - Apply introductory programming skills in different languages ICTPRG437 - Build a user interface ICTICT449 - Use version control systems in development environments You are required to meet the elements, performance criteria and oral communication items as outlined in the provided checklist.
Allowable Materials	Blackboard (Topic by topic) will include the following: Weekly Readings, Class notes, and Weekly Activities.
Required Resources	Portable hard-drive (supplied by you) Computer with: • Internet Access • Microsoft Office (or Office 365) • Access to Learning Management System (Blackboard) • Web links and example code can be downloaded from Blackboard Learning Management System • Desktop Computer with Windows Operating System • Appropriate IDE for the programming language • Appropriate Framework (e.g. .NET 9.0 for the C# language) • Programming standards and guidelines found in the assessment tab of Blackboard.

Assessment Coversheet

Assessment Title

Reasonable Adjustment	In some circumstances, adjustments to assessments may be made for you. If you require support for literacy and numeracy issues; support for hearing, sight or mobility issues; change to assessment times/venues; use of special or adaptive technology; considerations relating to age, gender and cultural beliefs; format of assessment materials; or presence of a scribe you need to inform your lecturer.
Assessment Submission	All questions and activities must be attempted. Use of research tools and peers in formulating answers are acceptable – but work submitted must be your own work. Final project documentation is to be uploaded to the appropriate area in the Blackboard course created for this unit. If you are marked as NYS (Not Yet Satisfactory) on your first attempt, you will be provided with another opportunity to re-attempt the assessment.
Project contents	This project consists of the following tasks: • Meeting with supervisor • Identify guidelines • Ascertain project specifications • Research prototype • Create design documentation • Obtain sign-off • Prepare and install a version control system (VCS)

C# One AT2 Task 2 (AT2.2) Overview

Task 2: UI Prototype and VCS Plan

Task 1 has the following accompanying documents and must be read in conjunction with them, they can be found in the Assessments tab on Black board. They are:

- C#One_AT2_ProjectBrief.pdf
- C#One_AT2.2_RoW.docx
- CITE-MS Programming Standards and Guidelines

There are three parts to this task. You will create a clickable prototype for a desktop application, complete some UI Design documentation and you will also research some Version Control Systems (at least 2) and choose one and install the desktop software.

Scenario

You have now been employed by CITE-MS as a junior developer on a trial basis due to your simple application that showcased your programming techniques.

As part of your trial you are now required to prove your abilities at designing a graphical user interface (GUI) application as well as your competency in using a version control system (VCS).

The student will take on the role of a junior developer at CITE MS.

The lecturer will take on the role of a supervisor at CITE MS.

C# One AT2 Task 2 (AT2.2) Part 1

Task 2 Part 1: Design & Prototype

Activity A: Arrange a meeting with your supervisor (lecturer)

You are required to have a meeting with your supervisor (lecturer) to clarify the project requirements.

You will contact your supervisor via email to arrange a meeting.

The email will include at least four questions that you will ask in order to determine the requirements of the application.

In your email request a suitable date and time for the meeting.

Take a screenshot of your email and paste it into the appropriate section of your record of work document (**Activity A – Email**)

Activity B: Project Specifications

You now need to state the project's functional and non-functional requirements.

When this is complete list the project tasks in the order that they need to be completed.

Use the supplied table in your record of work document (**Activity B – Project Specifications**)

Activity C: Identify appropriate organisational guidelines

You are required to read the supplied organisational guidelines and identify those that are directly relevant to the project.

List and describe at least six guidelines in the supplied table in your record of work document (**Activity C – Identify Organisational Guidelines**)

Activity D: Research applications to create prototypes

Compare at least two applications to be able to create a clickable prototype. Choose one and state your reasons.

Use the supplied table in your record of work document (**Activity D – Prototype Application Comparison)**

C# One AT2 Task 2 (AT2.2) Part 1

Activity E: Create Wireframe

Create a low-fidelity, basic wireframe of the planned GUI. This can be created in your chosen prototype application or another application of your choosing.

Paste a screenshot into the appropriate section in your record of work document (**Activity E - Wireframe**)

Activity F: Create clickable prototype

Save the prototype with the name **StudentID_AT2.2_Prototype**

Activity G: Obtain sign-off

C# One AT2 Task 2 (AT2.2) Part 2

Task 2 Part 2: UI Design Documentation

Activity A: Design the content flow

Show the content flow, this can be in text or diagram format

Activity B: UI Components Inventory

Complete the UI Component Inventory using your approved requirements and based on your prototype.

For each component state its purpose, data binding or source, default state, validation rules, and accessibility notes.

Activity C: Define UI Actions

Complete the table to list all user actions on each screen, the system response along with any pre and post-conditions. Link each action to a method or eventhandler.

Activity D: Itemise UI events

Complete the event map to list all of the control events where relevant including any keyboards shortcuts and focus change events.

Activity E: Chosen Language Justification

Identify the programming and UI technology you will use with a short justification that aligns to the task and organisational requirements. You may mention alternate options that were considered and why they were not chosen.

C# One AT2 Task 2 (AT2.2) Part 3

Part 3: Prepare and Install VCS

Activity A: Research a suitable VCS

Compare at least two VCS that suit the organisational requirements, select one and state your reasons for choosing.

Activity B: Pre-installation of VCS

Identify the subversion required, if any, and pre-installation factors

Write an email to your work colleagues explaining when the VCS software will be installed and state the disruption to the network in accordance with the supplied organisational policies and procedures. Take a screenshot and paste into the appropriate table in the Record of Work document.

Activity C: Installation and initial use of VCS

Complete the following

You will need to provide evidence (e.g. screenshots) of the following and add to the appropriate section of the Record of Work document.

- Create a personal account for your chosen VCS
- Install the desktop version of the VCS
- Configure the desktop version in accordance with the provided organisational requirements
    - e.g configure /gitignore template and UI/tool preferences
- Create local repository and main branch and add your application from AT2.1 to it
- Add a README and a simple CHANGELOG
- Make an initial commit and push

AT2.2 Submission
